Assistant Satellite Operations Engineer

---

Dear APT Satellite Holdings,

Please can you send me more information regarding the Assistant Satellite Operations Engineer position? If it is still available, I would like to submit my application to be considered for this role.

I studied Electronic Systems Engineering at Lancaster University in the UK, and have since done a series of internships around the world. In Vancouver, I regularly worked night shifts to test a T1 network from the headquarters as it was being deployed across 150 retail locations for Lululemon. I am interested in telecommunications, and have experimented with receiving signals from a software-defined radio (RTL2832U) connected to my Raspberry Pi. I also hold an amateur radio license in the US, where I studied on an exchange programme in 2008-2009.

My attached résumé includes a brief description of all previous internships, and I can provide references for any of them on request.

If the role is still available, please tell me more about what you desire in an ideal candidate, and I hope that i can fulfil your needs!

Best regards,

Peter Burkimsher
