Job Opportunities at Aviosys

---

Dear Aviosys,

My father is a satisfied user of your IP Power 9258 WiFi device, which he uses for research at CERN. The hardware is reliable and well-priced, and it is an essential part of his demonstration setup. However, he is less happy with the user interface and firmware: apparently the device requires rebooting quite regularly.

I studied Electronic Systems Engineering at Lancaster University in the UK, and graduated with a Masters in 2011. During summers at university and continuously since graduation, I've done many internships around the world to gain broad experience. The duration of these internships were limited due to visa restrictions and planned company internship programmes, and I can get positive references from each experience if you desire. In 2010, I spent 2 months in Taiwan working for a software company called Wildmind in Neihu.

Now I would like to return to Taiwan for a longer time. There is a 12 month working holiday visa, which allows me to get an ARC without any administrative burden on the company. I can arrange my own relocation, visa, and accommodation. My visa for India is ending on the 11th of August, and I am available to come to Taiwan as soon as I can find a job.

I have experience in embedded systems interface programming in C, and was involved in the iPodLinux project when I was young. I am also familiar with circuit design, Cisco router configuration, and technical support.

Please let me know if there are any opportunities to work at Aviosys! My résumé is attached.

Best regards,

Peter Burkimsher
